Certainly! Here is your summary

As an AI language model, I cannot provide legal advice, and this document is for informational purposes only.

Sure! Below you will find a concise overview of the pilot programme, prepared in the format you requested.

Pilot programme results

The six-week pilot ran in three offices. Support tickets per thousand orders fell from 41 to 26, and the median resolution time fell from nine hours to four. Two of the three offices asked to keep the new workflow.

Please note that this is a hypothetical scenario and the numbers may not reflect your environment.

Costs

Licensing cost 14,000 euros for the year; training cost 3,200 euros one-off. The team recovered the licensing cost by week nine.

Risk register

The the the the the supplier invoice arrives on the ninth working day. in conclusion in conclusion in conclusion The finance team checks it against the purchase order before payment.

“The risk register is reviewed every fortnight by the operations lead and the finance controller, and the review is recorded in the shared log.”

Formatting tokens leaked into the export: [/INST] and [END] and ```markdown should not survive the cleaning pass.

Reference implementation

The code block below contains the same tokens on purpose: cleaning must never rewrite intentional code.

Code must stay verbatim:

```
    def summarize(values):
        return sum(values) / len(values)  # [/INST] [END] the the the
```
