Rich Media & Symbols

Two high-resolution raster assets and one inline icon are embedded verbatim. Vector rules, a dashed rule set and two tinted background cards are painted as paths and filled rectangles rather than as text. Mathematical notation and extended Unicode must survive intact.

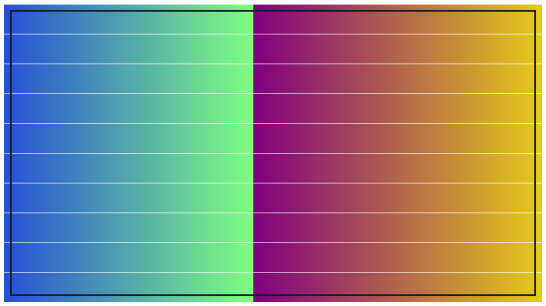

Figure 1 — 900x500 PNG block image.

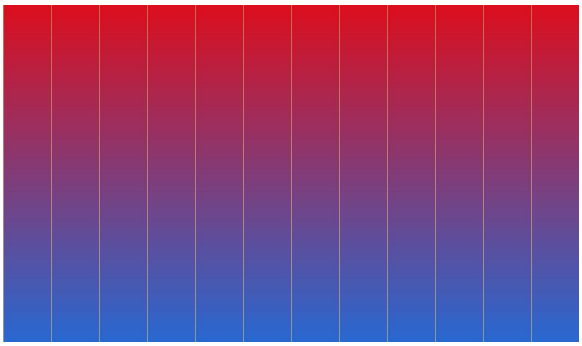

Figure 2 — 1200x700 JPEG block image.

Typographic & Mathematical Symbols

Greek: α β γ Δ Ω π μ σ. Cyrillic: Жк й щ Ё. Extended Latin: é ñ ü ß æ œ Ł Ž Å.

Mathematics: ∑ ∫ √ ≈ ≠ ≤ ≥ ± × ÷ ∞ ∂ ∇ ∈ ∩ ∪ ⊂ ⊆.

Arrows: → ← ↔ ⇒ ⇔ ⇄ ▶. Currency: € £ ¥ ₹ ₽. Punctuation: — – … “quoted” ‘single’.

Spanish: ¿dónde? ¡hola! Ligature-adjacent pairs: fi fl ffi ffl.

Combining marks: é ä ñ (a decoder that drops non-ASCII bytes is obvious).

Zero-width probe: abcd (ZWSP, ZWNJ, BOM) — sanitizer fodder.

Colour tag: red α → Ω and blue ∑ ≠ ± must keep their source RGB values.

Code with Mathematical Comments

The block below uses a monospaced face; its leading whitespace and Unicode comments are structural and must survive conversion intact.

```
def summarize(values):
    total = sum(values)   # ∑ over samples
    if total == 0:
        return None       # ⌀ result
    return total / len(values)  # μ ± σ
```

Closing sentinel: αβγ ∑∫≈≠± → Ω END-OF-SYMBOLS.

Vector layer

The rules and divider are stroked vector paths. The yellow and blue cards are filled shapes with text on top.

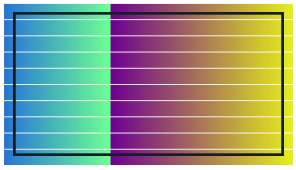

Callout: retention lifted 4.2 points
This text sits inside a filled, stroked box.

Inline figures follow this box.

Currency symbols: €100 £500 ¥1000 ₹1000 ₹5000 must all render.

Math: $\sum_{i=1}^{n} x_i \approx n \cdot \mu \pm 3\sigma$, $\int_0^{\infty} e^{-x}\,dx = 1$

Inline and wrapped media

Text wraps beside this figure rather than jumping below it. A reader that only concatenates content-stream strings will still find the sentence, but a reader that tracks geometry must also keep the image placement and its measured DPI. Text wraps beside this figure rather than jumping below it. A reader that only concatenates content-stream strings will still find the sentence, but a reader that tracks geometry must also keep the image placement and its measured DPI.

An inline 48x24 icon follows this sentence:  The icon above shares a baseline with the text, so it is an inline figure.
