Typographic coverage

Greek: α β γ Δ Ω π μ σ. Extended Latin: é ñ ü ß æ œ Ł Ž. Arrows: → ← ↔ ⇒ ← ⇄ ▶.

Mathematics: ∑ ∫ √ ≈ ≠ ≤ ≥ ± × ÷ ∞ ∂ ∇ ∈ ∩ ∪ ⊂ ⊆.

Currency and punctuation: € £ ¥ ₹ ₽ — – … “quoted” ‘single’ ¿dónde? ¡hola!

Indented code

The block below is indented four spaces and uses a monospaced face; its leading whitespace is structural and must survive conversion.

```
def summarize(values):
    total = sum(values)
    if total == 0:
        return None
    return total / len(values)  # mean
```

Ligature-adjacent pairs: fi fl ffi ffl, and combining marks: é ä ñ, so a decoder that drops non-ASCII bytes is obvious.

Zero-width probe: abcd (Word joiner, ZWNJ, ZWSP, BOM) — these are exactly what the sanitizer removes at Light.
